Render blocking requests — Est savings of 300 ms

Requests are blocking the page's initial render, which may delay LCP. Deferring or inlining can move these network requests out of the critical path. LCP FCP Unscored

URL	URL	Resource size Transfer size	Est savings Duration

Layout shift culprits

Learn more. OK, I understand.

Layout shifts occur when elements move absent any user interaction. Investigate the causes of layout shifts, such as elements being added, removed or their fonts changing as the page loads.

! Document request latency — Error!

Your first network request is the most important. Reduce its latency by avoiding redirects, ensuring a fast server response and enabling text compression. Unscored

▲ Network dependency tree

Avoid chaining critical requests by reducing the length of chains, reducing the download size of resources or deferring the download of unnecessary resources to improve page load. LCP Unscored

Preconnected origins

preconnect hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.

no origins were preconnected

Preconnect candidates

Add preconnect hints to your most important origins, but try to use no more than 4.

Origin	Est LCP savings
https://dilipa.com.ec	300 ms
https://scalashopping.com	300 ms
https://cruzazul.vtexassets.com	300 ms

Use efficient cache lifetimes — Est savings of 10 KiB
